together

The Afterlife of Research Code

- What happens to your code when your project is finished?
- Will someone be able to:
 - Find your code?
 - Use your code?
- Why would you want them to?

What is 'Good' Research Code?

- **Open?**
 - Open access, standards, data
- **3 R's?**
 - Repeatable, Reproducible, Reusable
- **Usable?**
- **Sustainable?**

Usability & Sustainability

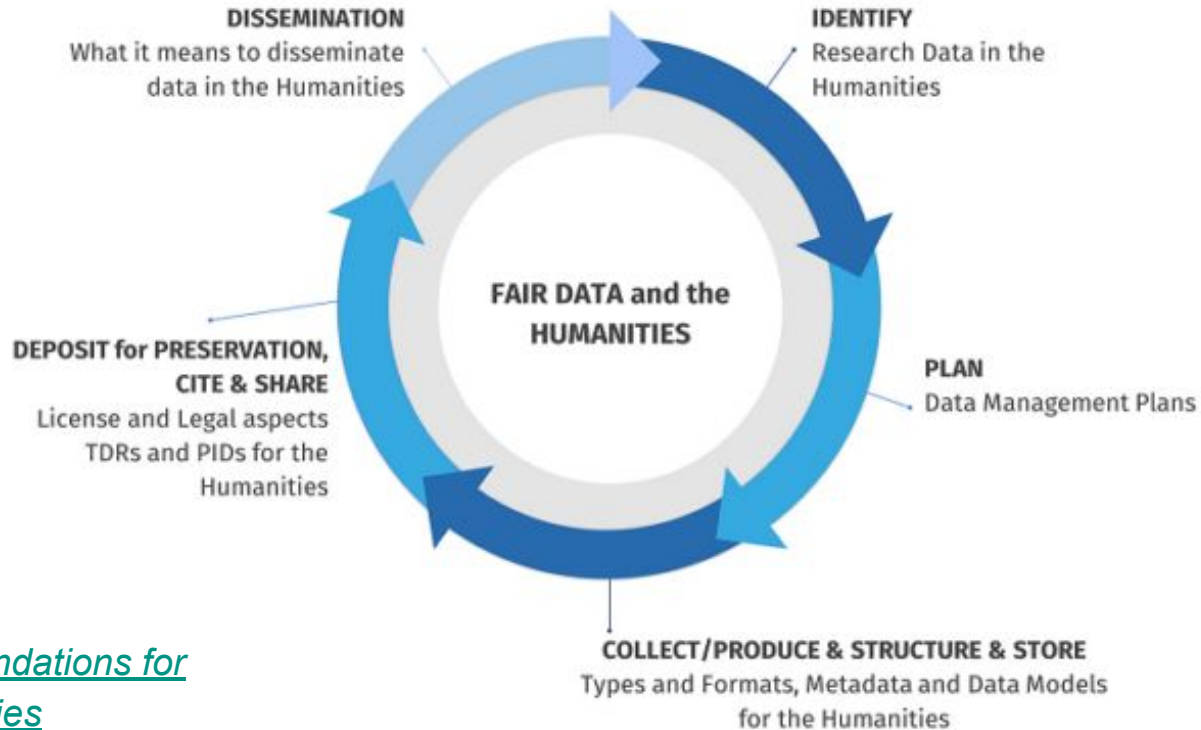

Criterion	Sub-criterion	Notes – to what extent is/does the software...
Usability	Understandability	Easily understood?
	Documentation	Comprehensive, appropriate, well-structured user documentation?
	Buildability	Straightforward to build on a supported system?
	Installability	Straightforward to install on a supported system?
	Learnability	Easy to learn how to use its functions?
Sustainability and maintainability	Identity	Project/software identity is clear and unique?
	Copyright	Easy to see who owns the project/software?
	Licencing	Adoption of appropriate licence?
	Governance	Easy to understand how the project is run and the development of the software managed?
	Community	Evidence of current/future community?
	Accessibility	Evidence of current/future ability to download?
	Testability	Easy to test correctness of source code?
	Portability	Usable on multiple platforms?
	Supportability	Evidence of current/future developer support?
	Analysability	Easy to understand at the source level?
	Changeability	Easy to modify and contribute changes to developers?
	Evolvability	Evidence of current/future development?
	Interoperability	Interoperable with other required/related software?

What is FAIR?

- Findable
- Accessible
- Interoperable
- Reusable

ALLEA Report: [Let's be FAIR! Recommendations for Sustainable Data Sharing in the Humanities](#)

FAIR for Research Code: Simple Recommendations

Findable	Identifier & public registry
Accessible	Public repository
Interoperable	Metadata & standards
Reusable	License & documentation

- [Five Recommendations for FAIR Software](#)
- Society for RSE: SORSE event [FAIR 4 Research Software](#)

Some Helpful Links

- [Making Your Code Citable](#)
- [How to cite and describe software](#)
- [Some Software Registries](#)

- [University of Cambridge Office for Scholarly Communication](#) (many resources on related topics)
- [Society of Research Software Engineering](#) (not just for 'engineers'; friendly and helpful)

Version Control

- What is version control?
- What is it for?
- What sort of version control programmes are available/used?
- What is the difference between git and GitHub?

Project Structure

Noble, William Stafford. 2009. "A Quick Guide to Organizing Computational Biology Projects." PLoS Computational Biology 5 (7): e1000424.

Dependencies

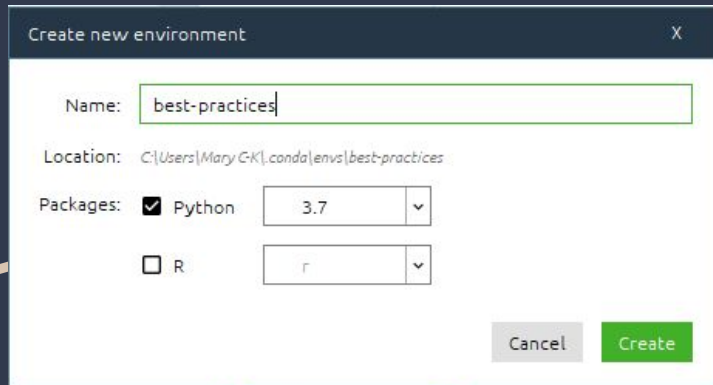

- What are dependencies?
- Why should you care about recording project dependencies?
- How can you manage dependencies?
- All about `requirements.txt`

Virtual Environments

- What is a virtual environment?
- Why should you care about creating virtual environments to run your code?
- When should you use virtual environments? (Hint: always!)

The screenshot shows a 'Create new environment' dialog box with the following fields and options:

- Name:** A text input field containing 'best-practices'.
- Location:** A text input field showing the default path 'C:\Users\Mary C-K\conda\envs\best-practices'.
- Packages:** A section with two options:
 - ☒ Python, with a dropdown menu set to '3.7'.
 - ☐ R, with a dropdown menu set to 'r'.
- Buttons:** 'Cancel' and 'Create' buttons at the bottom right.

Reusable Programs

\$ click_ 

- **Command-line programs:**
 - Automation
 - Reusability

```
(venv) $ python bin/named_entity_recognition_4.py -s  
data/henslow/letters_152.xml
```

```
